Modern advertising

- Google knows what you are searching for
- Amazon knows what you are in the market for
- Facebook knows what you like

- Google knows what you are searching for
 - Amazon knows what you are in the market for
 - Facebook knows what you like
-
- This info can be is used to advertise to you

Ad Platforms

- Utilize Google search data via AdWords API

by Johannes Burkhardt

```
devtools::install.github('jburkhardt/RAdwords')
```

- Utilize Amazon purchase history via Amazon Ads

NULL

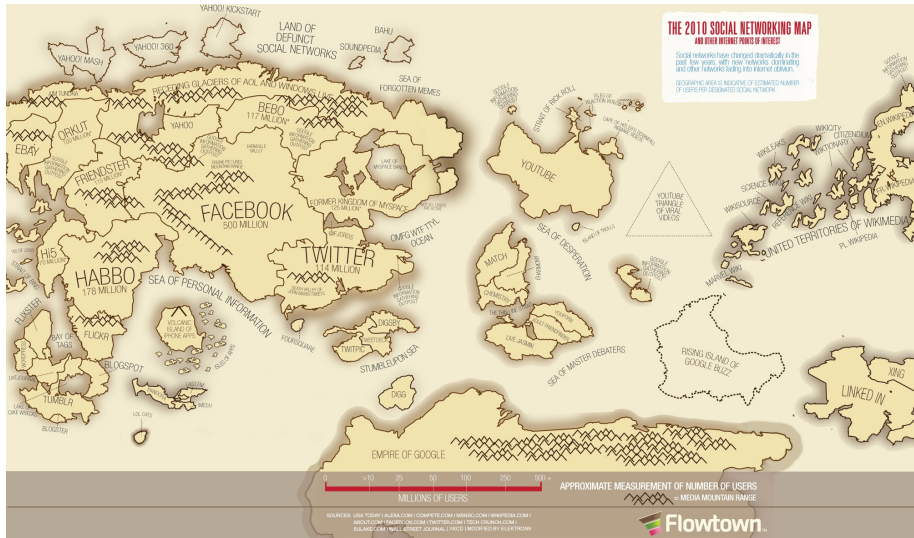

- Yahoo+Bing have joint search ad network & API

NULL

- Utilize Facebook likes & comments data via FB Marketing API

```
devtools::install.github('cardcorp/fbRads')
```

When to advertise on Facebook

When to advertise on Facebook

CARD.com's view of the world

Gergely Daróczy @daroczig · Apr 11

Just received my "I ♥ R" prepaid debit card from @CARD. Will be fun to use this #rstats designed card at #user2015 :)

Modern Marketing

Anatomy of a Facebook Ad Campaign

Source: Facebook Marketing API docs

Facebook Ad Campaign Structure Changes

- Anyone here from Facebook?

Facebook Ad Campaign Structure Changes

- Anyone here from Facebook?
- 2 changes in the campaign structure in 2014
- 2 -> 3 hierarchical categories
- Before July 2014, “Ad Sets” were called “Campaigns”
- At the API endpoints:
 - campaigns are called `adcampaign_groups`
 - ad sets are called `adcampaigns`
 - ads are called `adgroups`
- When creating an ad via the API, the adset id is called `campaign_id`
- 4 new Facebook Marketing API versions in October 2014

- Really!

Collect R package developer e-mail addresses

```
> url <- 'http://cran.r-project.org/web/checks/check_summary.html'
> packages <- readHTMLTable(url, which = 2)
> mails <- sub('.*<(.*)>', '\\1', packages$' Maintainer')
> mails <- sub(' at ', '@', mails)
```

Collect R package developer e-mail addresses

```
> url <- 'http://cran.r-project.org/web/checks/check_summary.html'
> packages <- readHTMLTable(url, which = 2)
> mails <- sub('.*<(.*)>', '\\1', packages$' Maintainer')
> mails <- sub(' at ', '@', mails)
```

```
> tail(sort(table(mails)))
## Dirk Eddelbuettel (35)
## Kurt Hornik (29)
## Scott Chamberlain (24)
## Martin Maechler (24)
## Paul Gilbert (22)

> length(unique(mails))
## 4023

> tail(sort(table(sub('.*@', '', mails))))
## gmail.com (1778)
## R-project.org (84)
## edu
```

Collect R package developer e-mail addresses

The screenshot shows the Facebook Adverts Manager interface. At the top, there's a navigation bar with the Facebook logo, a search bar, and user options. Below this, the 'Audiences' section is active, showing a list of audiences. One audience, 'R package maintainers', is highlighted. A tooltip message indicates a low match rate: 'We could only match 28% of your entries to Facebook profiles in the last update. Please check your source and try uploading it again.' The tooltip also includes a link to 'Upload Data File'.

We could only match 28% of your entries to Facebook profiles in the last update. Please check your source and try uploading it again.

[Upload Data File](#)

28 % match: only 900 accounts for 6,000+ R packages

Collect e-mail addresses from the R-help mailing list

Get the location of the archives:

```
> url <- 'https://stat.ethz.ch/pipermail/r-help/'
```

We need Rcurl for HTTPS:

```
> library(Rcurl)
```

Get URL of all archive files:

```
> R.help.toc <- htmlParse(getURL(url))
> R.help.archives <- unlist(
+   xpathApply(R.help.toc, "///table//td[3]/a", xmlAttrs),
+   use.names = FALSE)
```

Download archive files:

```
> dir.create('r-help')
> for (f in R.help.archives)
+   download.file(url = paste0(url, f),
+                 file.path('help-r', f), method = 'curl')
```

Extract e-mail addresses from the R-help mailing list

Regular expression matching date format in “From” lines:

```
> dateregex <- paste('[A-Za-z]{3} [A-Za-z]{3} [0-9]{1,2}',  
+                    '[0-9]{2}:[0-9]{2}:[0-9]{2} [0-9]{4}')
```

grep for lines matching the From field:

```
> mails <- system(paste0(  
+   "zgrep -E '^From .* at .* ",  
+   dateregex,  
+   "' ./help-r/*.txt.gz"),  
+   intern = TRUE)
```

Extract e-mail addresses from these lines:

```
> mails <- sub('.*From ', '', mails)  
> mails <- sub(paste0('[ ]*', dateregex, '$'), '', mails)  
> mails <- sub(' at ', '@', mails)
```

Extracted e-mail addresses from the R-help mailing list

```
> length(mails)
266449

> head(sort(table(mails), decreasing = TRUE))

                        8611                        7064
ggrothendieck@gmail.com p.dalgaard@biostat.ku.dk
                        5386                        3243
      jholtman@gmail.com      smartpink111@yahoo.com
                        3193                        2999

> length(unique(mails))
29266

> 29266 > 4023
TRUE \o/
```

Authenticate with the Facebook API

The screenshot shows the Facebook Developers 'Quick Start for Website' page. The navigation bar includes links for Developers, My Apps, Products, Docs, Tools & Support, and News, along with a search bar and a user profile icon. The main content area has a 'Start Over' button on the left and a 'Skip and Create App ID' button on the right. A modal window titled 'Create a New App ID' is centered on the screen. Inside the modal, there is a question 'Create **Rads demo app App?' followed by a 'NO' button. Below this is a checkbox labeled 'Is this a test version of another app?' with a 'Learn More' link. A 'Category' dropdown menu is set to 'Business'. At the bottom of the modal, there is a statement 'By proceeding, you agree to the Facebook Platform Policies' and two buttons: 'Cancel' and 'Create App ID'.

Create a New App ID

Create **Rads demo app App?

☐ NO Is this a test version of another app? [Learn More.](#)

Category

Business ▼

By proceeding, you agree to the Facebook Platform Policies

Cancel Create App ID

<https://developers.facebook.com/apps/>

Authenticate with the Facebook API

Create a token:

```
> library(httr)
> app <- oauth_app('facebook', 'your_app_id', 'your_app_secret')
> tkn <- oauth2.0_token(
+   oauth_endpoints('facebook'), app, scope = 'ads_management',
+   type = 'application/x-www-form-urlencoded')
> tkn <- tkn$credentials$access_token
```

Save this secret token (never commit to git repository) and load it in any later session:

```
> saveRDS(tkn, 'token.rds')
> tkn <- readRDS('token.rds')
```

Initialize connection to Facebook Marketing API:

```
> fbacc <- fbad_init(fid, tkn)
```

Create custom audience

```
> aud_id <- fbad_create_audience(fbacc, 'R-help posters',  
+ 'Unique e-mail addresses in R-help 1997-2015')
```

Reading audience info:

```
> fbad_read_audience(fbacc, aud_id, 'approximate_count')  
20
```

Adding e-mails to audience:

```
> fbad_add_audience(fbacc, aud_id, 'EMAIL', mails)
```

It usually takes a day or two for custom audiences to fully populate :(

```
> fbad_read_audience(fbacc, aud_id, 'approximate_count')  
8700
```

Create lookalike audiences

Load the number of attendees per country (see my poster tomorrow!):

```
> url <- 'http://rapporter.net/custom/R-activity/data/Rstats_2015.csv'
> library(data.table)
> RpC <- fread(url)
> user2015 <- RpC[user_2015 > 0, ]
```

Create a lookalike audience for each country:

```
> aud_ids <- sapply(1:nrow(user2015), function(i) {
+
+   try(fbad_create_lookalike_audience(
+     fbacc,
+     name           = paste('R-help posters in', user2015[i, NAME]),
+     origin_audience_id = aud_id,
+     ratio           = 0.01,
+     country         = toupper(user2015[i, IS02C])))
+
+   Sys.sleep(20)
+ })
```

Read lookalike audiences

Get the approximate count of each lookalike audience:

```
> lookalikes[!is.na(audience),  
+   size := fb_read_audience(fbacc, audience, 'approximate_count')[[1]]  
+   by = country]
```

```
> lookalikes[!is.na(audience), c('country', 'size'), with = FALSE]
```

	country	size		country	size
1:	Australia	173000	13:	Ireland	32800
2:	Austria	41500	14:	Italy	336200
3:	Belgium	72400	15:	Latvia	7800
4:	Brazil	1280400	16:	Mexico	758100
5:	Canada	253100	17:	Netherlands	110900
6:	Colombia	308200	18:	New Zealand	34500
7:	Faroe Islands	400	19:	Norway	36500
8:	France	392900	20:	Singapore	257000
9:	Germany	347700	21:	Slovenia	11200
10:	Greece	59900	22:	Spain	284200
11:	Hungary	61500	23:	Switzerland	43100
12:	India	2042000	24:	United Kingdom	478700
			25:	United States	2483200

Create a campaign

```
> campaign <- fbacc_create_campaign(fbacc,
+                                   name = 'Promote my useR! 2015 talk')
> fbacc_read_campaign(fbacc, campaign)
$id
[1] "*****"

$account_id
[1] "*****"

$buying_type
[1] "AUCTION"

$campaign_group_status
[1] "ACTIVE"

$objective
[1] "NONE"

$name
[1] "Promote my useR! 2015 talk"
```

Define target for an adset

All valid lookalike audiences:

```
> target <- lookalikes[!is.na(audience)]  
> setnames(target, c('name', 'id'))
```

The original R-help posters list:

```
> target <- rbind(target, list('R-help poster list', id1))
```

The original R package developers list:

```
> target <- rbind(target, list('R pkg developers list', id2))
```

Prepare JSON list:

```
> target <- list(custom_audiences = target)
```

Create an adset

```
> adset <- fb_ad_create_adset(  
+   fbacc,  
+   name = 'My budget for promoting my useR! 2015 talk',  
+   campaign_group_id = campaign,  
+   bid_type = 'CPC',  
+   bid_info = list(CLICKS = 42),  
+   campaign_status = 'ACTIVE',  
+   lifetime_budget = 4200,  
+   end_time = as.numeric(as.POSIXct('2015-07-01')),  
+   targeting = target)
```

Upload image

Get an image for the ad:

```
> img <- 'user_2015_logo.png'  
> download.file('http://user2015.math.aau.dk/gfx/useR2015.png', img)
```

Upload to Facebook:

```
> img <- fbacc_create_image(fbacc, img)
```

Take a note on the returned hash:

```
> str(img)  
List of 3  
 $ filename: chr "user_2015_logo.png"  
 $ hash      : chr "140423d688a2e71a6b0cbfd4d65526aa"  
 $ url       : chr "https://fbcdn-creative-a.akamaihd.net/hads-ak-xft1/t45.16  
> img <- img$hash
```

Create a creative

```
> url <- 'http://user2015.math.aau.dk/contributed_talks#210'
> creative <- fb_ad_create_creative(
+   fbacc,
+   name = 'How to create ads from R?',
+   body = paste(
+     'Learn how to create Facebook ads from R',
+     'at a contributed talk',
+     'at the useR! 2015 conference'),
+   title      = 'How to create ads from R?',
+   object_url = url,
+   image_hash = img$hash)
```

How to create ads from R?

user2015.math.aau.dk

Learn how to create Facebook ads from R
at a contributed talk at the useR! 2015
conference

Create an ad

```
> ad <- fbad_create_ad(  
+   fbacc,  
+   name          = 'An ad -- right from the R console',  
+   campaign_id = adset,  
+   creative      = creative)
```

A/B testing

```
> images <- c('http://www.r-project.org/Rlogo.png',
+             'http://user2014.stat.ucla.edu/images/useR-middle.png')

> for (l in 1:length(images)) {
+
